

# Technical Fabric

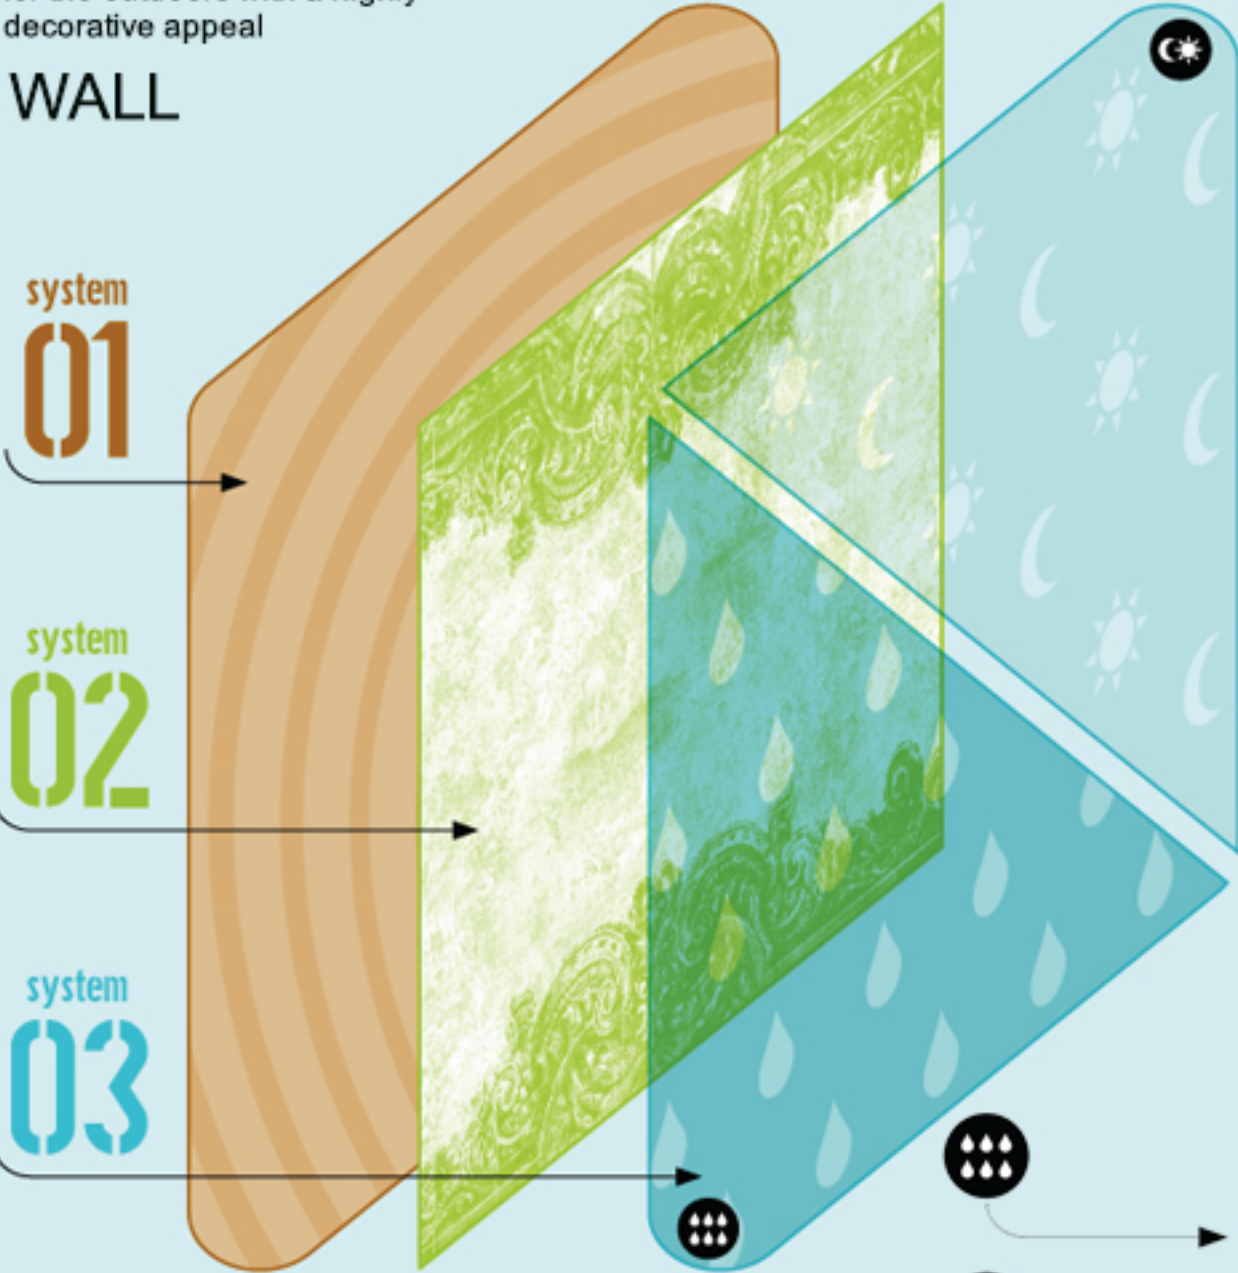

for the outdoors with a highly decorative appeal

## WALL

system 01

system 02

system 03

It is a complete system consisting of three base elements:

- 01 - the specific adhesive System01
- 02 - the technical fabric with graphic and design prints System02
- 03 - the finishing System03

The System03 finishing is available in two versions.

The 03DOOR is indicated for outdoor use with water-resistant and anti-UV, antimog (fluorinated) properties. Version 03WET is suitable for damp and wet environments, such as bathrooms and SPA areas, with a semigloss finishing providing resistance against humidity, yellowing and abrasion.

The System represents a valid alternative to traditional wall coverings and allows to experiment alluring solutions for outdoor decoration.

Its special configuration makes it suitable for applications on non-uniform surfaces.

As a structural element capable of increasing the uniformity of wall surfaces, it is also ideal for building restructuring projects.

The System is an unconventional wall covering solution with specific technical features, which maintains the mechanical properties of the raw materials and is resistant against humidity, shock and abrasion as well as weather proof for the outdoors.
